FAST PLANNING SOFTWARE

❖The basic functions of an Production Planning System include: inventory control, bill of material processing, and elementary scheduling. Production Planning helps organizations to maintain low inventory levels. It is used to plan manufacturing, purchasing and delivering activities. Manufacturing organizations, whatever their products, face the same daily practical problem - that customers want products to be available in a shorter time than it takes to make them. This means that some level of planning is required.

❖ Production Planning which lays out a detailed schedule of the required minimum start and completion dates, with quantities, for each step of the Routing and Bill Of Material required to satisfy the demand from the Master Production Schedule.

❖ Purchasing Planning lays out both the dates that the purchased items should be received into the facility and the dates that the Purchase orders, or Blanket Order Release should occur to match the production schedules.

FAST PLANNING SOFTWARE MODULE

Process Planning

Production Monitoring

Efficiency Quality Measurment

Sales Forecast & Planning

Project Planning

Budgeting & Cost Control

Manpower Task Planning & Reporting

Admin

Material Requirement Planning

Production Capacity Planning

FEATURES OF FAST **PLANNING** SOFTWARE

Web Based
Web based multi-user software. Can be accessed through internet as well as intranet.

Visual Graphic
Pictorial representation of key data to identify of critical issues /bottleneck.

Security
PPC Software is secured in industry at screen access level & data view level.

Easy to use
No jargons, simple language used. Intuitive & user friendly software.

Advance Technology
PPC is integrated Latest technology.

Touch Screen
PPC software is compatible with all type of portable & touch screen devices.

Configurability
The production software is very flexible and easily configurable to suit any type of business segment.

Barcode integration
Barcode integrate to improve speed & efficiency of the usage of software.
